### **DETAILED ACTION**

# Response to Arguments

1. Applicant's arguments with respect to claims 1, 3-6, and 8-22 have been considered but are moot in view of the new ground(s) of rejection.

# Allowable Subject Matter

2. The indicated allowability of claims 8-12 is withdrawn in view of the newly discovered reference(s) to Baker at el. (U.S. Patent No. 4,926,452). Rejections based on the newly cited reference(s) follow.

# Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 8-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Baker et al. (U.S. Patent No. 4,926,452).

Regarding claim 8, Baker discloses:

- a module configured to perform at least one of integrating the image data across a plurality of time frames (col. 23, lines 34-35: a camera begins to integrate image data for 3 time frames);

- a threshold module configured to apply thresholding techniques on the image data (col. 29, lines 1-29: using thresholding techniques for comparing the image data to the predetermined threshold value).

Regarding claim 9, Baker teaches at least one sensor configured to sense the scene across the plurality of time frames (col. 9, lines 11-21; at least one sensor 263).

Regarding claim 10, Baker teaches at least one additive fusion (col. 33, lines 36-40: synchronizing two motion image data).

Regarding claim 11, Baker teaches a pre-detection fusion (Fig. 1: detector 30 for pre-detecting fusion).

Regarding claim 12, Baker teaches at least one of a doubled-thresholding technique (col. 29, lines 1-29: repeating a first loop for doubled thresholding).

# Claim Rejections - 35 USC § 101

5. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

9. Claims 13-16 are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. Supreme Court precedent<sup>1</sup> and recent Federal Circuit decisions<sup>2</sup> indicate that a statutory "process" under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform

<sup>&</sup>lt;sup>1</sup> Diamond v. Diehr, 450 U.S. 175, 184 (1981); Parker v. Flook, 437 U.S. 584, 588 n.9 (1978); Gottschalk v. Benson, 409 U.S. 63, 70 (1972); Cochrane v. Deener, 94 U.S. 780, 787-88 (1876).

<sup>&</sup>lt;sup>2</sup> In re Bilski, 88 USPQ2d 1385 (Fed. Cir. 2008).

Art Unit: 2624

underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. For example, the steps of "extracting", "performing" and "determining" of claim 13 are not tied to any particular apparatus, and claim 13 does not transform data to any different state (the step of "extracting at least one feature form the image data" does not transform the image data to different state).

# Allowable Subject Matter

- 6. Claims 1, 3-6, 17-22 are allowed.
- 7. The following is a statement of reasons for the indication of allowable subject matter:

Regarding claim 1, the prior art, taken either singly or in combination, does not teach:

- the pre-detection temporal fusion... from the sensor; and the pre-detection spatial fusion... from two different sensors.

Regarding claims 3 and 4, since these claims depend from claim 1, they are also allowable for the same reason.

Regarding claim 5, the prior art, taken either singly or in combination, does not teach:

- fusing the frames of image data... at least one sensor.

Regarding claim 6, since this claim depends from claim 5, it is also allowable for the same reason.

Regarding claim 17, the prior art, taken either singly or in combination, does not teach:

- performing a pre-detection fusion technique on data corresponding to at least one extracted feature from each sensor.

Regarding claims 18-20, since these claims depend from claim 17, they are also allowable for the same reason.

Regarding claim 21, the prior art, taken either singly or in combination, does not teach:

- spatial processing means for fusing the temporally integrated sensor data from said temporal processing means, wherein said spatial processing means detects the target form the spatially fused data and provides an indication corresponding to the detected target.

Regarding claim 22, since this claim depends from claim 21, it is also allowable for the same reason.

#### **Contact Information**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANH H. DO whose telephone number is 571-272-7433. The examiner can normally be reached on 5/4-9.

Application/Control Number: 10/555,104 Page 6

Art Unit: 2624

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, BRIAN WERNER can be reached on 571-272-7401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
